Prepared for ServiceNow Flow Designer project submission

## Executive Summary

This project implements an automated workflow for Standard Laptop procurement using ServiceNow Flow Designer. The objective is to reduce manual intervention and ensure an approved request produces a configuration task for Hardware.

## Problem Statement

The current process can involve manual configuration-task creation and assignment after a Standard Laptop request is approved, which can create delays and extra work.

## User Story

As a member of the IT procurement team, I want a streamlined process for ordering Standard Laptops so that tasks are automatically generated and assigned to the Hardware team for configuration.

## Objectives

- Create a seamless experience for users requesting Standard Laptops.
- Reduce manual intervention and potential errors.
- Improve resource utilization through automated task allocation.
- Enhance efficiency and productivity in IT procurement.

## Implementation Summary

- Created Standard laptop task flow.
- Configured Service Catalog trigger.
- Used Create Catalog Task action.
- Mapped Requested Item Record.
- Configured short description and description.
- Assigned task to Hardware.
- Configured approval as Approved.
- Associated flow with Standard Laptop catalog item.

## Validation Path

Order Standard Laptop → open Request Number → approve → open Requested Item → open Catalog Tasks → verify task details and Hardware assignment.

## Conclusion

The automation provides a structured hand-off from approval to laptop configuration by creating and assigning the Catalog Task through Flow Designer.
